High-quality handicraft from Finland since 1979

Karoliina Candle burns almost smoke-free and odourless. It is made of high quality paraffin wax, candle colours and cotton wick. The flame illuminates the glowing colours throughout the candle, and creates an enjoyable atmosphere. Thick models burn like a colourful lantern; the brim remains unburned around the flame.

User Guide

Favour long periods of combustion (over 2h). Straighten the wick when needed, normally it is not necessary to trim it. Extinguish the candle if the brim widens too much. To avoid the smoke when you extinguish it, you can do it by pressing the wick momentarily into the molten paraffin.

Paraffin softens at 35 ° C and melts at 55 ° C.

Environment

Unburned paraffin is energy waste.
