S911 Lola Locator Device

The S911 Lola is a mobile Personal Emergency Response System (mPERS) that locates and recovers individuals by GPS tracking technologies. This small and portable personal GPS locator is combined with cellular phone capabilities that provides instant two-way communication between the holder of the S911 Lola GPS tracking device and the designated recipient. The S911 Lola excels in any situation where assistance is not readily available, or when the holder of the device is at risk due to being alone. It addresses the emergency requirements for: people with physical or cognitive disabilities, Lone Workers working in isolation, the protection recreational activities in remote areas, the security of children, personal asset tracking and more.

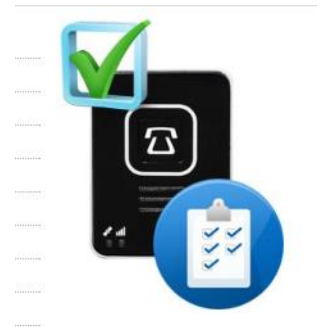

Similar in size to a car's remote starter or door opener, the S911 Lola can be attached to the holder's keychain or it can be carried within a pocket, backpack, and purse or with optional accessories be worn on a belt, lanyard or wrist strap.

TASK Community Care are official distributors of the 'Lola' Dementia Locator. Monitoring of the Lola can be carried out in our 24/7 monitoring centre or you can choose to monitor the Lola for yourself using your own computer, laptop, tablet or smartphone to locate a loved one who may have got lost.
