Overview

The Fall Detector is a device equipped with an automatic alarm in case of a fall followed by immobility. It also has a panic button which can be pressed in an emergency situation to transmit a message that help is needed. It was specially developed to be worn on the wrist with maximum comfort for everyday life. With its waterproof, hypoallergenic plastics and its ergonomic button, the Fall Detector can be conveniently carried as a watch and its internal battery can be replaced.

How it works

The Fall Detector combines a panic button with a fall detecting device. Each type of alert transmits a different alarm code which can be uniquely identified in our 24/7 CareLink Monitoring Centre.

When a significant impact occurs, the Fall Detector will start diagnosing the fall. Before the alert is transmitted, a vibration pre-alarm starts. During this time, the alarm can be cancelled by moving the arm. This avoids false alarms.

The Fall Detector is also able to avoid any false alarm by analyzing the fall and detecting if it should send an alarm or not. Indeed, the automatic trigger will only be activated if the person wearing the Fall Detector is not able to push the button, for example in case of unconsciousness or immobility. The fall detection is not activated in all fall situations, such as situations where no significant impact occurs.

Benefits

- ▶ Automatic fall detection
- ▶ Integrated vibration pre-alarm
- ▶ Fall detection can be easily cancelled
- ▶ 24/7 support gives peace of mind
- ▶ Typical battery life – 2 years if activated once per day
- ▶ Ergonomic and water-resistant

Warranty

Fall Detector – 2 Year Warranty
